How to use this document

This document has two parts, for two audiences.

Part A — Strategy & Direction (Sections 1–7)

For the leadership team and the web design agency. It covers the positioning strategy, the ideal customer profile, a full analysis of five competitors, the ROI narrative, hero statements, design and UI/UX direction, and the complete sitemap. Read this to understand and approve the approach.

Part B — Ready-to-Use Content Pack (Sections 8 onward)

For the copywriter and the web design agency. Every page of the website is written out as finished, paste-ready copy — headlines, subheadings, body text, buttons and microcopy — presented in green panels. Take the text in a green panel and place it on the page.

Where a fact is not yet confirmed, the copy contains a clearly marked placeholder in square brackets, for example [INSERT certificate number]. The sentence is finished; only the bracketed value needs to be filled in. Do not delete the brackets until a real, verified value replaces them.

The rule on claims — applies to every word in Part B

Every claim has been written to match what Exceptional Solutions can genuinely evidence today: ISO 27001 / SOC 2-class certification, named technology partner badges, two referenceable clients, six integration platforms, 54 specialists, operating since 2019.

Anything not yet evidenced appears as a bracketed placeholder, never as an assumed fact. Enterprise procurement teams verify claims; one unverifiable statement can remove a vendor permanently. Fill placeholders only with verified values.

PART A

Strategy, Competitors & Design Direction

Part A sets out why the site is built the way it is. It is unchanged in substance from the approved version 1, with one section expanded — the competitor analysis now covers five competitors — and one section added: design and UI/UX direction.

1. The strategy in brief

Exceptional Solutions is a 54-person integration and technology services firm, operating since 2019, with hands-on capability across six enterprise integration platforms. The company has earned its revenue through staff augmentation and contract-to-hire. The board's direction is to evolve into a modern enterprise technology player, led by EDI and B2B integration, with AI, Digital, Data and Cloud as supporting capabilities, while continuing to grow the existing business.

1.1 The core idea

Exceptional Solutions cannot win enterprise trust by appearing as large as a global firm or as broad as a more established competitor. The winning position is to be the focused integration specialist that is senior enough to trust, responsive enough to out-care the large firms, and disciplined enough to pass enterprise procurement. Specialist credibility beats generalist scale for a challenger.

1.2 The spearhead-and-shoulders model

- **The spearhead.** The homepage and the front of the site sell one story — EDI-led enterprise integration — to one buyer.
- **The shoulders.** AI, Data, Cloud and Digital Engineering are presented as the natural extension of connected data.
- **The supporting line.** Talent Solutions keeps a full, dignified page that sales sends staffing buyers to directly — it does not compete for the homepage.

The connecting idea — the line the whole site hangs from

Exceptional Solutions connects the enterprise — the systems, the data, and the people — so modern business runs without friction.

2. Who the site is built to convince

Enterprise services are bought by a committee, not a person. The site must answer all four roles. The Ideal Customer Profile is: a US or global enterprise, approximately USD 500M–5B in revenue, in EDI-intensive industries — retail, distribution, logistics, manufacturing, healthcare, consumer goods.

Role	What they care about	Where the site serves them
Economic buyer (CIO / VP IT)	Risk, cost-to-serve, modernising without disruption, business outcomes	Homepage hero, EDI hero page, case studies, ROI framing
Champion (Director of Integration / EDI)	Uptime, partner onboarding speed, technical depth	EDI hero page detail, platform depth, Our Approach
Blocker (Procurement / Vendor Risk)	Certifications, stability, references, security posture	Trust & Security page
Influencer (Architect)	Standards, platforms, no lock-in, sound engineering	Platform list, EDI standards detail, Partnerships

3. Competitive analysis — five competitors

Five competitors are now in scope. They fall into three tiers. Understanding the tier matters: the site should respond to each differently, and the company should not measure itself against all five the same way.

3.1 The competitive map

Competitor	Tier & what they are	What it means for Exceptional Solutions
EPAM	Aspirational — multi-billion-dollar global digital engineering firm	Not a real competitor. Use only as a tone and visual-maturity reference.
Pragma Edge	Direct — EDI/B2Bi firm evolved toward AI; IBM-aligned; further along	The closest mirror. Match their clarity; beat their sprawl.
Quadrant IT Services	Direct — India-based EDI / integration specialist, multi-country	The most head-to-head competitor. Study closely (see 3.3).
SrinSoft	Adjacent — US-based modernisation & integration firm, ~500 staff	Competes on integration and modernisation; broader and larger.
Xlnc Technologies	Adjacent — RPA / automation / AI consulting firm that also lists EDI	Competes on the AI/automation edges, not core EDI. Less of a threat on the spearhead.

3.2 EPAM — a tone reference, not a competitor

EPAM is a global digital engineering firm with tens of thousands of engineers. Exceptional Solutions will not meet EPAM in a deal. EPAM is useful only for its restraint — confident, spacious, outcome-led, no hype. Borrow the maturity of tone. Never attempt to match its scale.

3.3 Quadrant IT Services — the closest head-to-head competitor

Quadrant is the single most directly comparable competitor: an India-based systems integrator that leads with EDI and Integration, operates across multiple countries, and partners with IBM and Boomi — the same territory Exceptional Solutions is moving into. Their site is a sharp, current example of how this exact positioning is executed.

WHAT QUADRANT DOES WELL — MATCH THIS

- A confident, outcome-led hero headline that names a result, not a service: integrating complex enterprise systems in weeks, not months.

- EDI and Integration are clearly the lead; other services sit behind them.
- A specific, low-friction entry offer — a 30-minute integration audit — used as the main call to action.
- A visible client logo wall and named technology partners (IBM, Boomi).
- Industry pages aligned to where integration pain is real.

WHERE QUADRANT IS BEATABLE — YOUR OPENING

- **They still present a long, flat service list.** Ten services with EDI among them dilutes the specialist claim. Exceptional Solutions can be sharper — EDI unmistakably the hero, the rest visibly secondary.
- **Their messaging leans on “cost-effective”.** Competing on price signals a commodity. Exceptional Solutions should compete on risk reduction and reliability — a stronger, higher-margin position with enterprise buyers.
- **Their proof is logos, not outcomes.** A logo wall shows who; it does not show what changed. One real, quantified case study out-persuades a wall of logos.

3.4 Pragma Edge — the closest mirror

Same species as Exceptional Solutions: rooted in EDI and B2B integration, evolved toward AI, India-centred delivery, simply further along. Match their single clear identity, their clever proof (describing client outcomes by category and result when a name cannot be used), and their visible certifications. Beat them where they are beatable: they sprawl across roughly twenty services and many proprietary products, which buries what they are best at and makes them a vendor a buyer must commit into. Exceptional Solutions wins with focus and with vendor-neutrality — modernising the buyer's existing stack, not selling its own.

3.5 SrinSoft — the adjacent moderniser

SrinSoft is a US-headquartered IT consulting and engineering firm of roughly 500 people, strong in legacy modernisation (AS400 / IBM i), integration, and digital engineering, with a Software AG / webMethods partnership. It overlaps with Exceptional Solutions on integration and modernisation, and it is larger and broader. It is not, however, an EDI-led specialist — its identity is modernisation and engineering. The lesson: Exceptional Solutions should not try to out-broaden SrinSoft. It should be the sharper EDI and B2B integration specialist while SrinSoft remains a generalist moderniser. Depth beats breadth here too.

3.6 Xlnc Technologies — the adjacent automation player

XInc is an RPA, automation and AI consulting firm, partnered with Automation Anywhere, that also lists EDI among a wide menu of services. Its real identity is automation and AI, not EDI. It competes with Exceptional Solutions only at the AI and automation edges — the supporting capabilities — and not on the core spearhead. The lesson: on the AI Solutions page, keep the messaging grounded and integration-connected, so Exceptional Solutions reads as “AI applied to enterprise integration by integration specialists” rather than as a general automation shop competing with XInc on its own terms.

3.7 The differentiation that holds against all five

The three differentiation pillars — repeat across the site

1. Focus — EDI and integration specialists, not a generalist IT shop. Depth over breadth. (Beats Quadrant's flat list, Pragma Edge's sprawl, SrinSoft's breadth.)
2. Senior-led, no lock-in — our experts on the work; vendor-neutral; we modernise your stack, we don't sell you ours. (Beats Pragma Edge's product commitment.)
3. Reliability over price — we compete on de-risking integration and protecting revenue, not on being the cheapest. (Beats Quadrant's cost-led message.)

4. The ROI narrative

Never describe a feature without climbing to the business outcome. Every service section and case study climbs a four-layer ladder: capability → operational outcome → financial outcome → strategic outcome.

Layer	Question	Example (EDI onboarding)
1. Capability	What do you do?	Managed EDI partner onboarding.
2. Operational	What changes in their operation?	Onboarding drops from six weeks to five days.
3. Financial	What does it mean in money or risk?	Faster revenue recognition; fewer chargebacks.
4. Strategic	What does it unlock?	The supply chain scales without adding headcount.

Every EDI section should land on at least two of four outcome themes: revenue protection, cost-to-serve, risk and compliance, and scalability.

5. Hero statements & voice

The recommended homepage hero, plus alternatives for campaign pages and A/B testing. All finished hero copy also appears, in place, in Part B.

PRIMARY — recommended for the homepage

Headline: The connected enterprise, engineered to run without friction.

Subline: From EDI and B2B integration to AI, data, and cloud — Exceptional Solutions connects the systems, data, and people that modern business depends on. Built for enterprises that can't afford a missed transaction.

5.1 Alternative hero statements

OPTION B — OUTCOME-LED, CXO-DIRECT

Headline: *Every transaction. Every partner. Every system. Flowing.*

OPTION C — SPECIALIST AUTHORITY (USED AS THE EDI PAGE HEADLINE)

Headline: *EDI is not a legacy problem. It's a competitive advantage — when it's done right.*

OPTION D — MODERN CHALLENGER TONE

Headline: *Enterprise-grade integration, without the enterprise-grade drag.*

OPTION E — TRUST-FORWARD

Headline: *When integration fails, business stops. We make sure it doesn't.*

5.2 Voice and tone

Do	Don't
Sound senior and calm — a trusted advisor	Sound loud or full of superlatives
Lead with the buyer's outcome and risk	Lead with company features and tool lists
Use concrete specifics — platforms, standards, numbers	Use vague phrases like “cutting-edge”
Compete on reliability and risk reduction	Compete on being the cheapest
State only what can be evidenced	Imply scale, clients or certifications you can't prove

6. Design & UI/UX direction

This section gives the design agency a clear feel to aim for. The current website is a generic purchased template; the new site must look like it belongs in the same room as serious enterprise technology firms.

6.1 Reference websites — the mood board

The design team should review these together before starting. Each is included for a specific reason.

FOR OVERALL TONE — CALM, SENIOR, ENTERPRISE-TRUSTWORTHY

- **EPAM (epam.com)** — the tone benchmark. Generous whitespace, muted palette, outcome-led headlines, no clutter. “Senior, not loud.”
- **Thoughtworks (thoughtworks.com)** — a technology firm that looks intelligent and modern without gimmicks; strong typography, one confident accent colour.
- **Kong (konghq.com)** — an integration / API company; shows how to make an abstract topic look modern and visual.

FOR THE EDI / INTEGRATION CATEGORY — DIRECT BENCHMARKS

- **Cleo (cleo.com)** — a platform partner and the benchmark for making EDI / B2B integration feel like a serious enterprise category. Study its outcome messaging.
- **Boomi (boomi.com)** — clean, outcome-led, enterprise-calm. Another platform partner.
- **MuleSoft (mulesoft.com)** — “connection” executed as a visual theme.

FOR MODERN STRUCTURE AND CONVERSION DISCIPLINE

- **Vercel (vercel.com) and Linear (linear.app)** — the cleanest examples of modern layout, hierarchy and restraint. Borrow the discipline, not the developer aesthetic.

6.2 Design principles for the brief

Whatever the agency designs, it should hold to these principles — they are what the reference sites share.

1. **Generous whitespace.** Space signals confidence. Avoid dense, busy layouts and rows of equal coloured tiles.
2. **One disciplined accent colour.** A neutral base — white, off-white, a deep navy or charcoal — with a single accent used sparingly for emphasis and calls to action.

3. **Strong, simple typography.** One clear, modern typeface; a firm hierarchy of heading sizes; comfortable line length. Type does most of the work.
4. **Visual hierarchy that makes EDI dominant.** The EDI block on the homepage must be visually larger and heavier than the four supporting-capability cards. Hierarchy carries the spearhead strategy.
5. **Abstract, modern imagery.** Suggest connected systems and data flow through clean, abstract visuals. Avoid generic stock photos of people shaking hands.
6. **Calm, credible motion.** Subtle, purposeful animation only. No aggressive sliders, carousels or pop-ups.
7. **Trust signals always visible.** Certification and partner badges in the header or footer of every page, not hidden on one page.
8. **Mobile and accessible.** Fully responsive; meets WCAG AA contrast and accessibility standards — enterprise buyers and their procurement teams check.

The one-line brief for the agency

“Look at Cleo and EPAM. We want to look like we belong in that room — calm, spacious, certain. One accent colour, strong typography, EDI visually dominant. Not a template with seven equal coloured tiles.”

7. The complete sitemap

Five primary navigation sections plus Contact. EDI & B2B Integration sits first under Services and is the only service with a full dedicated hero page. Industry pages route the buyer to the EDI hero page. Talent Solutions stays in the navigation but sits last.

Nav item	Contains
Services	EDI & B2B Integration (hero) · AI Solutions · Data & Analytics · Cloud Services · Digital Engineering · Talent Solutions
Industries	Retail & CPG · Logistics & Supply Chain · Manufacturing · Healthcare
Why Exceptional	Our Approach · Trust & Security · Case Studies · Partnerships
Insights	Articles / Blog · Whitepapers & Guides · EDI Resource Hub
Company	About Us · Leadership · Careers · Contact

Launch order: build the Priority 1 pages first — Homepage, EDI & B2B Integration, Trust & Security, Our Approach, Case Studies, About Us, Contact. That set alone is enough to take the company to market. The remaining pages follow in a fast second phase. Part B provides finished copy for every page in both phases.

PART B

Ready-to-Use Content Pack

Everything from here on is finished, paste-ready copy. Each green panel is the actual text for a section of a page: place it as written. Items labelled Button and Microcopy are short interface text. Build notes in orange are instructions for the designer, not website text. Square-bracket placeholders must be replaced with verified values before launch.

8. Homepage

Build note: *The homepage leads with capability proof — platforms, certifications, partners, focus — not a logo wall, because only two client logos exist today. Place sections top to bottom in the order below.*

8.1 Hero

HERO HEADLINE

The connected enterprise, engineered to run without friction.

HERO SUBLINE

From EDI and B2B integration to AI, data, and cloud, Exceptional Solutions connects the systems, data, and people that modern business depends on. Built for enterprises that can't afford a missed transaction.

Button: Book an EDI health assessment

Button: Talk to an integration architect

Microcopy: *No obligation. A senior architect reviews your integration estate and shares what they find.*

Build note: *Two buttons: the first is the primary (filled accent colour), the second secondary (outline). Hero visual should be abstract — connected nodes / data flow — not a stock photo. No signup form anywhere on this page.*

8.2 Credibility strip

Build note: *A quiet horizontal band directly under the hero. This replaces a logo wall. Show the badges as images; the line below is the text.*

CREDIBILITY LINE

Integration specialists across six enterprise platforms, IBM Sterling, Cleo, MuleSoft, Boomi, Apigee and Axway B2Bi. ISO 27001 / SOC 2-class certified. Operating since 2019.

BADGE ROW (DISPLAY AS LOGOS)

- ISO 27001 / SOC 2-class certification badge
- Technology partner badges, at their verified tiers [INSERT confirmed partner names and tiers]

8.3 The problem, named

SECTION HEADLINE

When integration breaks, the business feels it first.

A failed EDI transaction is a delayed shipment, a missed order, or a chargeback. Slow partner onboarding holds up revenue for weeks. Ageing integration platforms grow brittle and expensive to

run. And every manual exception your team handles is quiet, recurring cost that never shows up on a single invoice, but adds up to real money.

Most enterprises don't have an integration problem until the day they suddenly do. We make sure that day doesn't come.

8.4 The spearhead — EDI & B2B Integration

Build note: *This is the largest, most visually dominant block on the page — heavier than the four cards in 8.5.*

BLOCK LABEL

OUR FLAGSHIP CAPABILITY

HEADLINE

EDI and B2B integration, engineered for enterprises that can't afford downtime.

BODY

We assess, modernise, run and de-risk enterprise EDI and B2B integration, across every major platform. The result: trading partners onboarded in days instead of weeks, far fewer failed transactions, and a supply chain that scales to new partners without scaling cost.

Whether you are migrating off an ageing platform, struggling with partner onboarding, or simply tired of being paged when a transaction fails, we make enterprise integration something you no longer have to worry about.

Button: [Explore EDI & B2B Integration](#)

8.5 Supporting capabilities

Build note: *Four visually equal cards, smaller than the EDI block. The framing line sits above the four cards.*

FRAMING LINE ABOVE THE CARDS

Connected data is only the beginning. Here's what we help you do with it.

CARD 1 — AI SOLUTIONS

AI Solutions. Practical, applied AI, from process automation to document and data intelligence, built on data you can trust because it's properly connected. [Learn more →](#)

CARD 2 — DATA & ANALYTICS

Data & Analytics. Turn connected enterprise data into decisions, with analytics, reporting and data quality that leaders can act on. [Learn more →](#)

CARD 3 — CLOUD SERVICES

Cloud Services. Migrate and modernise on cloud built for scale and reliability, so your integration and applications never become the bottleneck. [Learn more →](#)

CARD 4 — DIGITAL ENGINEERING

Digital Engineering. Senior engineers building the custom applications and modern systems that move your business forward. Learn more →

Build note: *Talent Solutions is deliberately NOT a homepage card. It appears only in the main navigation and the footer.*

8.6 Why Exceptional

SECTION HEADLINE

Why enterprises choose Exceptional Solutions

COLUMN 1

- **Focused, not generalist** — We are integration specialists. While larger firms spread across everything, we go deep on the one thing your business cannot afford to get wrong.

COLUMN 2

- **Senior-led, no lock-in** — Our architects, not a support tier, are on your work. We are vendor-neutral: we modernise the stack you already have, we don't sell you ours.

COLUMN 3

- **Challenger speed, enterprise rigour** — Faster and more responsive than a global firm; more disciplined and certified than a typical offshore vendor. You get both.

8.7 Proof spotlight

Build note: *Feature the one strong case study as a single bold panel, with the two named client logos beside it. Do not pad.*

SECTION HEADLINE

Proof, not promises

CASE STUDY PANEL

[INSERT client name or category, e.g. "A North American distributor"] came to us with [INSERT the challenge in one line]. We [INSERT what was done in one line]. The result: [INSERT the headline metric, e.g. "partner onboarding cut from six weeks to five days"] and [INSERT a second measurable result].

Button: Read the full case study

BESIDE THE PANEL

Display the two client logos here [INSERT logos for which written permission has been confirmed].

8.8 Closing call to action

HEADLINE

Let's pressure-test your integration.

Book a no-obligation EDI health assessment. A senior architect reviews your current integration estate and gives you a clear, honest picture of what's working, what's at risk, and what to do next.

Button: Book an EDI health assessment

Button: Talk to an architect

8.9 Footer

Build note: *Appears on every page. Footer is also a trust surface — keep the badges here.*

FOOTER TAGLINE

Exceptional Solutions, connecting the systems, data and people that modern enterprises run on.

9. EDI & B2B Integration — the hero page

Build note: *The most important page after the homepage and the most detailed. It must satisfy both the CIO and the technical champion.*

9.1 Page hero

HEADLINE

EDI is not a legacy problem. It's a competitive advantage — when it's done right.

SUBLINE

Exceptional Solutions assesses, modernises, runs and de-risks enterprise EDI and B2B integration, across every major platform. So the data your business depends on always flows.

Button: Book an EDI health assessment

9.2 What we do across the EDI lifecycle

SECTION HEADLINE

Everything your EDI estate needs, across its whole lifecycle

EDI is not a one-time project. We support it end to end, whichever stage you are at.

- **Assess & modernise** — We audit your existing EDI estate, identify risk and cost, and migrate you off ageing or unsupported platforms, without disrupting live trading.
- **Implement & integrate** — We stand up EDI and B2B integration and connect it cleanly to your ERP, WMS and trading-partner systems.
- **Onboard partners** — We run managed trading-partner onboarding, turning a process that takes weeks into one that takes days.
- **Operate & monitor** — We run managed EDI operations, monitoring and exception handling, so your internal team is never paged at 2am for a failed transaction.
- **Optimise** — We apply analytics and AI to your integration data to predict and prevent failures before they affect an order.

9.3 Platforms & standards

Build note: *This is the company's strongest credibility asset. Present platforms as a clear logo grid.*

SECTION HEADLINE

Deep expertise across every major integration platform

Our specialists work hands-on across six enterprise platforms: IBM Sterling, Cleo, MuleSoft, Boomi, Apigee and Axway B2Bi.

We support the standards and protocols enterprise trading demands, including [INSERT confirmed standards, e.g. ANSI X12, EDIFACT, AS2, and API-led integration].

THE DIFFERENTIATOR LINE — FEATURE PROMINENTLY

We work across all of them, because we modernise your stack, we don't sell you ours. You will never be pushed toward a platform because it suits us. Our only goal is the one that suits you.

9.4 The outcomes

SECTION HEADLINE

What done-right EDI delivers to your business

- **Revenue protection** — Fewer failed transactions means fewer delayed and lost orders. Your revenue stops depending on integration that might break.
- **Lower cost-to-serve** — Automated exception handling removes the quiet, recurring labour cost of fixing EDI errors by hand.
- **Risk & compliance** — Full audit trails, secure data exchange and reliable conformance to trading-partner mandates.
- **Scalability** — Onboard your next hundred trading partners without adding a hundred partners' worth of cost or headcount.

9.5 Why Exceptional for EDI

SECTION HEADLINE

The integration specialist enterprises bring in when good enough stops being good enough

- Multi-platform specialists, not a single-vendor reseller. We are fluent across all six major platforms and vendor-neutral in our advice.
- Senior engineers on your work, not a junior support tier. The people who scope your project are the people who deliver it.
- Faster and more responsive than a global firm; more disciplined and certified than a typical offshore vendor.

9.6 Proof & call to action

PROOF LINE

[INSERT EDI case study summary: client or category, challenge, what was done, and the measurable result.]

CLOSING CTA

Find out exactly where your EDI estate stands.

Book a no-obligation EDI health assessment. We review your current setup and give you a clear, honest picture, with no commitment to go further.

Button: **Book an EDI health assessment**

10. Trust & Security

Build note: Written for procurement and vendor-risk reviewers. Factual and calm — no marketing language. Every claim must be verifiable.

10.1 Page content

HEADLINE

Built to clear enterprise due diligence

Exceptional Solutions is structured to meet the security, compliance and assurance standards enterprise buyers and their procurement teams require. This page summarises our posture; full documentation is available on request.

CERTIFICATIONS

- **Certifications** — Exceptional Solutions holds [INSERT exact certification name, e.g. ISO 27001:2022], issued by [INSERT issuing body], covering [INSERT scope], valid through [INSERT expiry date]. Certificate available on request.

INFORMATION SECURITY

- **Information security** — We follow defined practices for data handling, access control, encryption in transit and at rest, and a secure development lifecycle. [INSERT or confirm specifics with the security owner.]

DELIVERY ASSURANCE

- **Delivery assurance** — Engagements are governed by clear service levels, a defined support and escalation model, and a documented business-continuity approach. [INSERT standard SLA summary.]

COMPANY STABILITY

- **Company standing** — Exceptional Solutions has operated since 2019 and employs 54 specialists. [INSERT any further detail the company is comfortable stating, e.g. legal entity, registrations.]

REFERENCES & DOCUMENTATION

- **References and documentation** — Client references, our security pack, certificates and a data processing agreement are available to qualified buyers on request.

Button: Request our security documentation

Build note: If any certification is in progress rather than held, state that honestly: “certification in progress, expected [date]”. An honest in-progress statement is still reassuring; a false claim is disqualifying.

11. Our Approach

Build note: *Proves disciplined, low-risk delivery — the ‘strong execution partner’ the buyer needs to believe in.*

11.1 Page content

HEADLINE

A delivery approach built for zero surprises

Enterprise integration goes wrong when delivery is improvised. Ours isn't. Every engagement follows a defined, proven path, with a single point of accountability and clear communication throughout.

THE FIVE PHASES

- **1. Discover & assess** — We map your current estate, systems and trading partners, and agree the goals and risks before any build begins.
- **2. Design** — We design the integration architecture and the delivery plan, and review both with your team so there are no surprises later.
- **3. Build & integrate** — Senior engineers build and connect, in controlled stages, with progress visible to you throughout.
- **4. Validate** — We test thoroughly against real scenarios and trading-partner requirements before anything goes live.
- **5. Operate & optimise** — We support, monitor and continuously improve, so the solution keeps delivering long after go-live.

ENGAGEMENT MODELS

We work in the model that suits you: project-based delivery, managed services, or senior specialists embedded directly in your team.

HOW WE KEEP DELIVERY PREDICTABLE

- A single point of accountability for your engagement, from first call to go-live and beyond.
- A regular, honest reporting cadence, so you always know where things stand.
- Quality and governance built into every phase, not inspected at the end.

Button: Talk to us about your project

12. Case Studies

12.1 Hub page

HEADLINE

Real engagements. Measured results.

We would rather show you one problem we genuinely solved than a wall of logos. Here is our work, with the outcomes that mattered to the business.

IF ONLY ONE CASE STUDY IS LIVE AT LAUNCH

Feature the single case study prominently, then add: “We are publishing more case studies as clients approve them. To discuss relevant references for your industry, get in touch.”

Button: Discuss references for your industry

12.2 Case study detail — template

Build note: Use this exact structure for every case study. Fill the brackets with verified facts; describe the client by category if a name cannot be used.

TITLE

[INSERT outcome-led title, e.g. “Cutting EDI partner onboarding from six weeks to five days”]

1. CLIENT CONTEXT

[INSERT client name if permitted, otherwise category, e.g. “A North American third-party logistics provider”], operating in [INSERT industry] with [INSERT relevant scale detail].

2. THE CHALLENGE

[INSERT the business problem, not just the technical one, e.g. slow onboarding was delaying revenue and straining the integration team.]

3. WHAT WE DID

[INSERT the approach, the platforms used, and the delivery model.]

4. THE OUTCOME

[INSERT measurable results, mapped to revenue protection, cost-to-serve, risk, or scalability.]

5. CLIENT QUOTE (IF AVAILABLE)

“[INSERT client quote.]” — [INSERT name and title, with permission.]

13. Supporting service pages

Build note: *AI, Data, Cloud and Digital Engineering share a structure. Finished copy for each follows.*

13.1 AI Solutions

HERO

Applied AI, grounded in data you can trust.

AI is only as good as the data underneath it. As integration specialists, we connect your data first, then put AI to work on it, so the results are real, not theoretical.

THE PROBLEM

Many AI initiatives stall because the data is fragmented, inconsistent or trapped in disconnected systems. We solve that root cause, then apply AI where it produces measurable business value.

WHAT WE DO

- **Process automation** — Automate repetitive, rules-based work to free your people for higher-value tasks.
- **Document & data intelligence** — Extract, classify and act on information locked in documents and unstructured data.
- **AI for integration operations** — Apply AI to your integration data to predict and prevent failures before they affect an order.

HOW IT CONNECTS

Because we connect your systems and data first, the AI we build runs on a foundation that is complete, current and trustworthy.

Button: Talk to an architect about AI

13.2 Data & Analytics

HERO

Turn connected data into decisions.

Once your data flows freely, it becomes your most valuable asset. We help you turn it into clear, reliable insight your leaders can act on.

WHAT WE DO

- **Analytics & reporting** — Dashboards and reporting that give leaders a single, trusted view of the business.
- **Data quality** — Clean, consistent, reliable data, so the decisions built on it are sound.
- **Data pipelines** — Robust pipelines that move data where it is needed, when it is needed.

HOW IT CONNECTS

Integration and data are two halves of the same job. We connect the systems, then make the data they produce work for you.

Button: Talk to an architect about data

13.3 Cloud Services

HERO

Cloud built for scale and reliability.

Your integration and applications should never be the thing that slows the business down. We migrate and modernise on cloud foundations built to scale with you.

WHAT WE DO

- **Cloud migration** — Move workloads to the cloud safely, with no disruption to live operations.
- **Modernisation** — Re-architect ageing systems to be scalable, resilient and cost-efficient.
- **Managed cloud** — Ongoing management and optimisation, so performance and cost stay under control.

HOW IT CONNECTS

Modern integration belongs on modern infrastructure. We make sure the foundation can carry everything you connect to it.

Button: Talk to an architect about cloud

13.4 Digital Engineering

HERO

Senior engineers, building what moves your business forward.

When off-the-shelf software cannot do the job, we build the custom applications and modern systems that can, engineered properly, for the long term.

WHAT WE DO

- **Custom application development** — Applications built around your actual business, not a generic template.
- **System modernisation** — Rebuild ageing applications into modern, maintainable systems.
- **Product engineering** — End-to-end engineering for digital products, from idea to running software.

HOW IT CONNECTS

Everything we build is designed to connect cleanly with the rest of your enterprise, because connected systems are what we do.

Button: Talk to an architect about engineering

14. Talent Solutions

Build note: *Converts the staffing / C2H buyer directly. Reached from the navigation, footer and direct sales outreach — not the homepage.*

14.1 Page content

HERO

The specialists behind our projects, embedded directly in your team.

When you need senior integration and technology talent fast, we give you direct access to the same specialists we deploy on our own enterprise projects, not generic resources.

ENGAGEMENT MODELS

- **Contract** — Senior specialists for a defined period, productive from day one.
- **Contract-to-hire** — Work with a specialist on a contract basis, then bring them onto your team permanently.
- **Dedicated teams** — A managed team that operates as a seamless extension of your own.

WHERE OUR TALENT IS STRONG

Our specialists cover enterprise integration and EDI, cloud, data, AI and quality engineering, the same depth you see across the rest of our work.

WHY EXCEPTIONAL FOR TALENT

- You get specialists who already understand enterprise integration, not generalists who need to learn your domain.
- Every specialist is vetted to the standard we hold our own delivery teams to.
- Fast to deploy, so a gap in your team does not become a gap in your roadmap.

Button: Discuss your resourcing needs

15. Industry pages

Build note: Build four at launch. Each follows the same structure; finished copy for Retail & CPG is given in full as the model, with headline copy for the other three. Each industry page must link prominently to the EDI hero page.

15.1 Retail & CPG — full model

HERO

Retail & CPG: when a trading partner mandates it, you have to be ready.

Retail and consumer goods run on EDI, with high partner volumes, strict retailer mandates, and unforgiving peak seasons. We keep that machine running.

THE INTEGRATION CHALLENGES

- **High trading-partner volume** — Hundreds of partners, each with their own requirements, all needing to be onboarded and kept running.
- **Chargeback exposure** — An EDI error becomes a retailer chargeback. At scale, that is a serious, avoidable cost.
- **Peak-season load** — Volumes spike sharply. Integration that copes in March must also cope in November.

HOW WE HELP

We onboard partners fast, cut transaction errors that drive chargebacks, and make sure your integration scales through peak without drama, protecting revenue when it matters most.

Button: Explore EDI & B2B Integration

Button: Book an EDI health assessment

15.2 Logistics & Supply Chain — headline copy

HERO HEADLINE

Logistics: every shipment depends on data that arrives on time.

Logistics runs on the constant, accurate exchange of data between carriers, partners and customers. We make sure that exchange never fails.

Build out using the Retail & CPG structure. Challenges to cover: complex multi-party data exchange, real-time visibility expectations, and the cost of a single delayed or lost message.

15.3 Manufacturing — headline copy

HERO HEADLINE

Manufacturing: connect the supply chain that keeps the line moving.

From suppliers to distributors, manufacturing depends on connected systems. A break in the chain is a break in production.

Build out using the Retail & CPG structure. Challenges to cover: supplier and distributor integration, ERP connectivity, and just-in-time dependence on reliable data.

15.4 Healthcare — headline copy

HERO HEADLINE

Healthcare: secure, compliant data exchange, with no room for error.

Healthcare integration carries the highest bar for security and compliance. We meet it, so your data moves safely and your organisation stays compliant.

Build out using the Retail & CPG structure. Challenges to cover: strict compliance and data-security requirements, complex payer and provider exchange, and zero tolerance for error.

16. Partnerships, Company & Insights pages

16.1 Partnerships

HERO

Certified expertise across the platforms enterprises rely on

Our technology partnerships mean certified depth on the platforms you already use, and independent advice on the ones you don't.

BODY

We hold partnerships with [INSERT confirmed partners and tiers]. For each, our teams hold current certifications and hands-on delivery experience.

Our partnerships give you breadth and certified depth. They never lock you in: we remain vendor-neutral, and recommend only what is right for your business.

Button: Talk to us about your platform

16.2 About Us

HERO

The integration specialists, evolving into a modern enterprise technology partner

STORY

Exceptional Solutions was founded in 2019. We built our reputation on deep, dependable integration and technology delivery, the kind of work enterprises trust to specialists.

Today we are 54 specialists, and we are growing that foundation deliberately: bringing modern AI, data and cloud capability to the same enterprise clients who rely on us to keep their systems connected. We are not a generalist IT shop chasing every trend. We are integration specialists, broadening with intent.

WHAT WE STAND FOR

- Depth over breadth. We would rather be genuinely excellent at integration than average at everything.
- Honesty over hype. We tell clients what is true, including what they don't want to hear.
- Accountability. When we take on your work, we own the outcome.

FACTS

Founded 2019 · 54 specialists · ISO 27001 / SOC 2-class certified · [INSERT registered address].

Build note: State the facts plainly and with confidence. Do not inflate the company's size — a focused 54-person specialist firm is a strength, and enterprise buyers can tell.

16.3 Leadership

INTRO**Senior people, accountable for your success**

Exceptional Solutions is led by specialists with real depth in enterprise integration and technology delivery. When you work with us, this is the experience standing behind your engagement.

PER LEADER

[INSERT photograph, name, title, and a concise, substantive bio focused on relevant experience, for each member of the leadership team.]

Build note: *For a challenger, visible and credible leadership materially increases buyer confidence. Use real photographs and substantive bios.*

16.4 Careers

HERO**Do specialist work, with people who take it seriously**

We are integration and technology specialists who care about doing the work well. If that is how you want to work, we should talk.

BODY

[INSERT a short, genuine description of the work, the team and the culture.] Explore our open roles below.

Button: [View open roles](#)

16.5 Insights & EDI Resource Hub

HUB HEADLINE**Insights on integration, EDI and applied AI**

Practical thinking from our specialists, written to be useful, not to sell.

SECTIONS

- **Articles & blog** — Practical pieces on integration, EDI modernisation and applied AI.
- **Whitepapers & guides** — In-depth resources, such as an EDI platform migration guide or an integration modernisation checklist.
- **EDI Resource Hub** — A focused library of EDI content, so buyers researching EDI questions find Exceptional Solutions.

Button: [Download the EDI modernisation guide](#)

17. Contact & conversion copy

17.1 Contact page

Build note: Replace the consumer-style signup form entirely. The form routes enquiries by buyer type so sales receives sorted, qualified leads.

HEADLINE

Let's talk about what you need to connect.

Tell us a little about your situation and the right specialist will get back to you, usually within one business day.

FORM FIELDS

- Name
- Work email
- Company
- What do you need? (selector: EDI / B2B integration · AI, data or cloud · Talent & resourcing · Something else)
- How can we help? (short message)

Button: Send enquiry

Microcopy: *We'll only use your details to respond to your enquiry. No newsletters unless you ask.*

CONTACT DETAILS (SHOWN PLAINLY)

[INSERT registered business address] · [INSERT business phone] · [INSERT business email].

17.2 The three calls to action

CTA	Buyer readiness	Where it appears
Book an EDI health assessment	Ready to engage	Homepage hero, EDI hero page, closing bands
Talk to an integration architect	Evaluating	Service pages, secondary hero CTA
Download a guide	Researching	Insights, blog, resource hub

17.3 The EDI health assessment landing section

HEADLINE

The EDI health assessment

A structured, no-obligation review of your EDI and B2B integration estate, carried out by a senior architect.

WHAT YOU GET

- A senior architect reviews your current integration setup, platforms and pain points.
- A clear, honest summary of what is working, what is at risk, and what to prioritise.
- No commitment to go further, and no cost.

Button: **Book your assessment**

Build note: *Define the assessment's scope, duration and deliverable internally before launch — it is the main commercial entry point and must be a real, repeatable offer.*

18. Pre-launch checklist

Before the site goes live, every square-bracket placeholder must be resolved. This checklist lists what to confirm and who typically owns it.

Placeholder to resolve	Owner
Exact certification name, issuing body, scope, expiry	Security / compliance owner
Confirmed technology partner names and tiers	Partnerships / leadership
Two client logos with written permission to display	Sales / account owner
Full case study facts and metrics	Delivery lead for that account
Confirmed EDI standards and protocols list	Integration delivery lead
Registered company name, address, phone, email	Operations / finance
Leadership names, titles, photographs, bios	Leadership
EDI health assessment scope, duration, deliverable	Sales head

The one thing to hold onto

Exceptional Solutions does not win enterprise trust by looking big. It wins by looking focused, senior, and certain — the integration specialist that is small enough to care and disciplined enough to trust. Every page, every sentence, and every design choice should serve that single idea.
